Ingenico & Legal Age Security Software... An Economical Solution For Managing **AGE VERIFICATION**

A LOW-COST SOLUTION TO BETTER MANAGE AGE-RESTRICTED SALES

Use the Ingenico Elite 710, Legal Age Security Software application and the E-Seek M200 reader (for states that use a 2D bar code) to improve the management of age restricted sales. Information is always current as it is stored on the Legal Age host, not on the terminal - an Ingenico exclusive. This low-cost age verification solution offers several levels of service, all incorporating state-of-the-art reporting using the Legal Age Security Software web site. The web site provides hard copy evidence that your customers have been carded.

THE ELITE 710 IS A LOW-COST, VERSATILE POS SOLUTION

The Elite 710 is the smallest EFT POS terminal on the market today, but is big on value and performance. With its built-in thermal printer, large backlit display, full featured keyboard that provides cognitive touch response and an EMV approved smart card reader, the Elite 710 is easy to use and implement. Its multi-application capabilities make it ideal for use by retailers and restaurants alike wishing to increase customer service, loyalty and revenues. When paired with an E-Seek M200 barcode reader and Legal Age Security Software, the Elite 710 provides you with a full featured, low-cost solution for age verification relating to age-restricted sales.

- Handles all payment types - credit, EBT, Debit, Check
- Multi-Application capability provided by Ingenico's UNICAPT development platform
- Operates a wide variety of popular value-add applications
 - Gift Card
 - Loyalty
 - Pre-Paid
 - Time & Attendance

LEGAL AGE SECURITY SOFTWARE PROVIDES THE MERCHANT WITH ADDED SECURITY

Selling age-restricted goods to a minor or allowing an under age person into an establishment could cost the merchant significantly. Reduce the chance of state or Federal fines, legal action and unmerited claims through quickly and easily carding every purchase via Legal Age Security Software. Access to Legal Age Security Software is provided by any Elite transaction terminal and an E-Seek M200 barcode reader. The system can range from the very basic verification of age to the most sophisticated, building a database from the information read from the license.

The application is simple to use because data is stored on the Legal Age web site. There is no way the data can be out-of-date, like other terminal applications, because all state algorithms and formats are stored on the host computer and constantly reviewed for accuracy.

- Scans drivers license via magnetic card reader or 2D bar code via the E-Seek device
- Host validates license and confirms legal age using sophisticated software
- Detailed reporting available from Legal Age host
- Manual entry of birth date also supported

E-SEEK M200 BARCODE READER

Reads 2D barcodes quickly, accurately and reliably. This high performance, low-cost reader provides a speedy, accurate and easy to use interface ideal for age verification and electronic transaction applications. Simply plug the reader into a Legal Age Security Software enabled Elite 710 and you're ready to go.
